

## RSTA Courses

An important objective of the RSTA is the continued improvement in the competence of the road surfacing industry's workforce. To facilitate this, RSTA has developed a training programme that includes:

- Provision of training courses developed for junior engineers and technicians
- Seminars for experienced engineers
- Pre-season workshops for workforce induction

Attendance on these courses will meet the requirements of Sector Scheme 13, BBA HAPAS and RSTA/ADEPT Codes of Practices as proof of continued professional development upon successful attainment of the RSTA Silver Certificate, and all courses are CPD approved by the IHT.

Details of forthcoming courses and seminars are provided at [www.rsta-uk.org/calendar](http://www.rsta-uk.org/calendar)

In addition, to the training programme, RSTA also has 2 training centres based in Dundee and Exeter for training in surface dressing practices and plant. Details of the training centres can be obtained from the RSTA office.
